5. Which module do you find the most important? Why? (5 points)
6. Provide recommendations to improve the system. (10 points)

1. SAP

2. The module of the system when I use it is Material Management (MM), Sales and Distribution (SD), Production Planning (PP), Controlling (CO), Financial Accounting (FI). So the SD module which is the sales or the inquiry process by the sales team with their sales order after that MM module will undergo on it for the checking the material stack if ever in the inventory module have available materials or none, and in PP module the system features is design for scheduled orders to have been accomplish with the deadline alongside with their product orders. And the CO module in system is costing for their budget also function for the profit analysis management, and last is the FI module it is the financial reports and general ledger of the company for the clients and vendors.

3. **-Search Bar**
 - Chat Assistance**
